PROFESSIONAL SUMMARY

Hands-on and detail-oriented **Junior Python Developer** with practical experience building automation scripts, integrating Generative AI APIs (Google Gemini, OpenAI), and developing client-facing web applications. Proven capability in building Retrieval-Augmented Generation (RAG) workflows using FAISS vector search, automating data processes with Python, and deploying interactive mobile-first catalogue websites with WhatsApp enquiry integration. Strong foundational knowledge in Git/GitHub and cloud deployment on AWS EC2. Eager to contribute to a collaborative engineering team.

CORE TECHNICAL SKILLS

Programming & Scripting: Python (Core Python, OOP, Scripting, Automation, File Handling, Web Scraping)

Generative AI & LLMs: Retrieval-Augmented Generation (RAG), FAISS Vector Search, Sentence-Transformers, Llama 3 / Ollama, OpenAI API, Gemini API, Prompt Engineering

Web & APIs: REST APIs, JSON Processing, HTML5, Tailwind CSS, JavaScript (Basics), WhatsApp Business Link API Integration

DevOps, Cloud & Tools: Git, GitHub, AWS EC2 (Basic Linux Deployment), Google Colab (GPU Runtimes), VS Code

Database Fundamentals: SQL Fundamentals, MySQL basics (XAMPP environment)

PROFESSIONAL EXPERIENCE

Freelance Python & Web Developer

May 2024 – Present

Self-Employed • Remote (Chennai, India)

- Developed custom Python automation scripts and responsive web applications for small businesses and commercial clients.
- Implemented WhatsApp lead-generation systems enabling local retailers to showcase products and engage customers directly without complex e-commerce overhead.
- Managed project version control with Git & GitHub and deployed applications on AWS EC2 and static cloud platforms.
- Communicated directly with business owners to translate business workflows into simple, working software solutions.

FEATURED TECHNICAL PROJECTS

Retrieval-Augmented Generation (RAG) Document Q&A System

Independent Project

Python, Llama 3, Ollama, FAISS, Sentence-Transformers, Google Colab

- Built a vector-based RAG pipeline to query and extract factual answers from reference text documents.
- Implemented text chunking, generated dense embeddings with Sentence-Transformers, and indexed them in **FAISS** for sub-second similarity search.
- Configured local LLM inference with **Llama 3** via **Ollama** on Colab GPU, providing grounded, context-aware responses.

AI-Powered Workflow Automation & Data Processing Script

Independent Project

Python, Google Gemini API, OpenAI API, REST APIs, JSON Handling

- Engineered automated Python scripts integrating LLM APIs (OpenAI & Gemini) for automated data extraction and summarization.
- Implemented robust API authentication, request error handling, token management, and structured JSON output parsing.

Interactive Retail Catalogue & WhatsApp Lead System

Client Project • Live

HTML5, Tailwind CSS, JavaScript, WhatsApp API, Netlify (demo-project614713.netlify.app)

- Designed and deployed a responsive, mobile-first showcase catalogue website for local boutique and retail textile businesses.
- Integrated 1-click WhatsApp enquiry buttons with dynamic product codes, converting store visitors into direct sales leads.

EDUCATION

Diploma in Computer Science and Engineering

2022 – 2024

Sembodai Rukmani Varatharajan Polytechnic College, Tamil Nadu

Grade: First Class | Relevant Coursework: Python, Data Structures & Algorithms, OOPs, Computer Networks, Operating Systems

KEY STRENGTHS

- Strong Problem-Solving:** Practical debugging ability to diagnose runtime exceptions, read documentation, and write modular Python code.
- Fast Learner & Adaptability:** Quick at mastering new developer tools, API frameworks, and cloud services through hands-on implementation.
- Execution Mindset:** Focus on delivering reliable, straightforward software that solves real business requirements without over-engineering.
